

Company Profile

Established in 1993, Intertec Components is an independent wholesaler for top-quality electronic components – with focus on relays, optoelectronics, solenoids and semiconductors. Our stock check provides you with access to more than 800,000 of these products. You will make a find here: <http://www.stockcheck.intertec-components.de>.

We deliver new and inspected original stock goods of all major manufacturers as well as special products to be purchased at short notice. Intertec's linecard includes well-known manufacturers like Fujitsu, Omron, Panasonic, Hongfa, Texas Instruments, OmniVision and many, many more...

Intertec Components GmbH has been member of THE BROKER FORUM since 25 February 2001 and member of ERAI since 26 January 2006.

Throughout Europe Intertec Components is the biggest Non-Franchise distributor for relays. We carry a permanent stock of more than 1 million pieces, and also provide solutions for allocations and obsolete relays.

Since the beginning of 1999, Intertec Components has been paving the way with CMOS and CCD image sensors and camera modules. Today a complex accessory program as well as TFT monitors and motion sensors are available.

Starting with the first solenoid business in 1998, we have permanently been extending the solenoid area. In the meantime, Europe's largest assortment of solenoids is waiting for you. All models, all sizes are available for the most complicated fields of application.

Besides electromechanical components, we have also been purchasing semi-conductors on the world market for many years.

Now – in times of allocation – fakes have been booming enormously in this area. Intertec Components knows from its long experience how to develop special preventive measures: e.g. buying parts from ERAI members or proving "critical" parts of authenticity. There we benefit from our long-lasting relationships with test houses, as positive test results are the only counter-measures against fakes.

Long-term customer retention is stabilized, not only because of our ISO 9001:2000 certification, but even because of original quality products, reliable services and an innovative logistic concept, thus our slogan: **"We love components"**.
